

EXHIBIT 4.12. Natural Disasters Jigsaw

- 1.** We call something a “natural disaster” when nature causes something bad to happen and there is a lot of damage.
- 2.** A flood is a natural disaster. In a flood, a lot of water comes and can go into houses and buildings. Many times floods happen when there is a lot of rain.
- 3.** An earthquake is a natural disaster. The ground shakes during an earthquake, and buildings and bridges can fall down when it is a very bad one. Many earthquakes happen in California, but most of them do not cause a lot of damage. Sometimes, though, big earthquakes happen and people die.
- 4.** Hurricanes are a natural disaster. In hurricanes, it is very, very wet and windy. The wind blows many things over, like signs, trees and telephone poles. The wind can also blow people over if they are outside. Tornadoes are another natural disaster. They are also very windy, but most of the time it is not raining when tornadoes happen.
