

## EXHIBIT 5.9. Mammoths Cloze

Fill in the blanks with the correct form: **they** or **them**

Mammoths became extinct 4,000 years ago. Scientists think they went extinct because humans hunted \_\_\_\_\_ and the climate got warmer. When it got warmer, some of the plants \_\_\_\_\_ needed to eat died out. Mammoths only ate plants.

Now, scientists believe they can create a mammoth from genes they have discovered in mammoths who died long ago and were frozen. They think we can learn a lot about \_\_\_\_\_ if we bring the animals back to life.

Other scientists believe that it would be a bad idea to bring back animals who have gone extinct. If we do that, \_\_\_\_\_ think society will worry less about the environment. They say that people won't care about destroying the environment that animals need to live if they just think we can bring \_\_\_\_\_ back after they die.
